The Essential Pristine Health Guide

*Six changes we believe make the biggest difference to
how you feel.*

There is a way of living that our bodies still remember.

Water that moves the way nature made it. Food grown in living soil. Morning light on your skin before a screen ever reaches your eyes.

None of it is complicated, and none of it is new. We are simply paying attention to what worked long before anyone thought to sell us the alternative.

This guide is not a prescription. It is what we practise, what we have observed, and what we believe is worth your attention.

Six changes. If you did nothing else, we believe these are the ones that matter most.

Take what resonates. Leave the rest.

Some things charge you. Some things drain you.

A living body carries a negative charge. Everything you take in either gives that charge or steals it.

This is the idea that ties all six pillars together, and it comes from Robert Gourlay's work on water and living systems. Life runs on energy and charge, not chemistry alone.

Some things give: water from a living source, fresh food, sunlight, bare earth, love. Some things take: water stripped and piped, food processed past recognition, chronic stress, disconnection.

Neither side is dramatic on any given day. That is exactly the point. The choices are small, they are daily, and they accumulate.

Where we describe Gourlay's ideas in this guide, we say so.

Charge givers, charge stealers.

CHARGE GIVERS

Water from a living source

Fresh food from living soil

Morning sunlight

Bare feet on the earth

Love, joy, hope, gratitude

Time in nature, no purpose

Real sleep

CHARGE STEALERS

Water stripped and piped

Food processed past recognition

Days that begin with a screen

Life lived on rubber and carpet

Stress, resentment, grief carried

Disconnection from nature

Sleep treated as optional

The left column gives your body a negative charge. The right column takes it away. Nothing on either list will change your life this afternoon. Both lists change your life over years.

This guide is about tilting the balance back toward the left.

Where to start, and what to expect.

Each pillar has one small thing you can do today. Not a programme, not a protocol. One thing, today, and then tomorrow if it suited you.

PILLAR	ONE THING TO TRY TODAY
1 Structured water	Drink water before meals, not during
2 Gut health	Add one real fermented food
3 Grounding	Ten minutes barefoot outside
4 Morning light	Outside before any screen
5 Whole food	Upgrade one thing you eat often
6 Intention	Ten minutes, no phone, no task

The first two carry the most weight. If you only have room for one change, start at the top.

1 Structured water

START HERE

THE ONE WE WOULD CHANGE FIRST

THE DIFFERENCE IS CHARGE

Water is the foundation of a living body. Almost every molecule in you is a water molecule.

But not all water is the same, and the difference we care about is charge.

Water that has tumbled over stones, spiralled through a creek bed and sat under open sky picks something up along the way. Robert Gourlay's work describes it as structured: ordered into a hexagonal form and carrying a negative charge, drawn from the earth's magnetism, from light, from vortex and flow.

Town water has had all of that taken from it. Stripped, pressurised through pipes, held still in a tank. Gourlay describes what comes out the other end as de-structured and positively charged. We would call it dead water.

WHY IT MATTERS TO US

We believe water is not simply a delivery vehicle for hydration but the medium your whole body works in. A living body holds a negative charge. We believe the water you put into it should carry one too, rather than take one away.

That is the whole idea. Restoring the charge is what structuring is for, and it is the change we made first and would make first again.

We are honest that this is not settled mainstream science. It is what we practise and what we have observed, in our own home and in our own experiment, which we document openly on the site, results and all.

Most people can taste the difference immediately, once they start paying attention.

ONE THING TO TRY TODAY

Drink your water before meals rather than during them. It is what we do, and we find food sits better for it. The thinking we follow is that it keeps the stomach's own acid concentrated for breaking food down.

WHAT IT IS

You are carrying an entire population of microbes, inherited at birth, fed by everything you have eaten since. They are how food becomes you.

Modern life is hard on them. Chlorinated water, ultra-processed food, sugar in almost everything, medication reached for when it is not needed. Over time, the diversity thins out.

WHY IT MATTERS TO US

This sits alongside water at the centre of what we do, and for the same reason. Both are about what you take in at the most fundamental level. You can eat perfectly well and still not benefit if the system that processes it has been depleted.

Rebuilding is slow and unglamorous, and worth the patience it asks for.

What we practise

Liquid probiotics Daily, to bring the diversity back rather than patch over it.

Ancestral eating Diverse whole foods. Slow-cooked meats and real bone broth. Fermented things.

Far less sugar Less than the average person eats without noticing, which is a startling amount once you look it up.

Structured water Which is where this pillar meets the first one.

ONETHINGTOTRYTODAY

Add one fermented food to your day. Not a supplement, an actual food. Sauerkraut, kefir, yoghurt with nothing added to it. Start there.

3 Grounding

THE OLDEST THING IN THIS GUIDE

Put your bare feet on the earth. Stand in the grass. Walk on wet sand. Swim in the ocean. Put your hands on a tree.

That is the whole practice, and it is the easiest one to dismiss.

We spend our lives insulated. Rubber soles, floorboards, carpet, cars, buildings. Whole days where no part of us touches the ground we evolved on.

The theory is about electrons and charge. We would encourage you to try it before you decide what you think of the theory, because the experience is immediate and does not ask you to believe anything first.

Ten minutes barefoot on grass changes something. We think most

ONETHINGTOTRYTODAY

Take your shoes off outside. Ten minutes. That is

4 Early morning light

SMALL, FREE, CHANGES THE DAY

Get outside near sunrise and let natural light reach your eyes and skin before anything artificial does.

Early light is different from midday light. It is softer, warmer, weighted toward the red end. It is the light your body has woken to for as long as there have been bodies.

Morning light seems to set something. Sleep comes easier. Energy arrives at more sensible hours. Mood steadies.

We believe the timing matters as much as the light itself. First thing, before the phone.

ONE THING TO TRY TO DAY

Tomorrow morning, go outside before you look at a screen. Even five minutes. Coffee on the step counts.

5 Organic whole food

FOODTHATWASRECENTLYALIVE

Eat food grown in soil that is also alive, as close to where you are as you can manage.

Vegetables and fruit. Slow-cooked meat and broth. The nutrientdense things people have quietly forgotten: oysters, sardines, mushrooms, organ meat if you can stomach it. Nothing with a list of ingredients you would need to look up.

Freshness is not sentimental. Food starts changing the moment it is harvested, and something is different about produce picked that morning versus produce that has spent days in transit and weeks in storage.

We believe you are eating the vitality of the thing, not only its nutrients.

ONE THING TO TRY TO DAY

Find one thing you eat regularly and get the best version of it you can. Not everything. One thing. Then notice whether you can tell.

6 Intention, love and happiness

LAST, BECAUSE IT HOLDS UP THE REST

How you live is not separate from how well you live. Love, joy, hope, gratitude, purpose, stillness. And on the other side: chronic stress, resentment, grief you have not put down, the low hum of too much news and not enough quiet.

We could have left this pillar off. It is the least measurable thing here and the easiest to sound soft about.

We put it last because it holds up all the others. You can drink the best water in the world and eat perfectly and still be wound tight and unwell. The body does not separate these things, even though we do.

So, then.

Build real connections. Find work that means something. Sleep properly, six to eight hours, because that is when your body does its repairing.

Get quiet sometimes. Be in nature without a purpose. Trust yourself over the noise.

ON E T H I N G T O T R Y T O D A Y

Ten minutes outside with no phone, no podcast, no task. Just outside. Most people find this genuinely difficult, which tells you something.

Where we stand

Everything in this guide reflects what we practice and believe at Pristine Wellness. It is our perspective, offered honestly, and it is not medical advice.

Much of it, particularly around water and living systems, draws on the work of Robert Gourlay and the opposite of established mainstream medicine. We share it because we find it valuable, and because we would rather tell you plainly where our thinking comes from than dress it up as something it is not.

Nothing in this guide is intended to diagnose, treat, cure or prevent any condition. Please talk to a qualified health professional about your own health, especially before making significant changes, and particularly if you are pregnant, unwell, or taking medication.

Question the status quo. Including ours.

The Pristine Experiment

We are documenting our own structured water trial in the open, results and all, at pristinewellness.com.au
